Ebru Angün is assistant professor at the Faculty of Engineering and Technology, Galatasaray University. Her main research interests involve simulation-optimization, stochastic programming and simulation, with applications to reverse logistics and humanitarian logistics, and quantitative methods for decision making under uncertainty.

Thomas Bartz-Beielstein is professor of Applied Mathematics at Cologne University of Applied Sciences, where he is head of the research center Computational Intelligence, Optimization and Data Mining (CIOP), together with Prof. Konen. His research mainly focuses on Design and Analysis of Experiments, Computational Intelligence, Sequential Parameter Optimization, and stochastic optimization. Over the last years, he contributed tot he development of the sequential parameter optimization toolbox SPOT, whose main purpose is to determine improved parameter settings for optimization algorithms to analyze their performance.

Russell Cheng currently is Emeritus Professor at Southampton having previously been Professor of Operational Research and Head of the OR Group from 1999 to 2007, in the School of Mathematics, University of Southampton, United Kingdom. He obtained an MA from Cambridge University, and a PhD from University of Bath. He is author of well over 100 publications on: Design and Analysis of Simulation Experiments, Non-standard Parametric Estimation, Computer Generated Graphics, Optimal Control of Industrial Processes, and Marine Simulation.

Annalisa Cesaro graduated in Computer Science Engineering at the Roma Tre University, in 2006. In 2010 she earned her Ph.D. in Computer Science and Automation (Operations Research) from the Roma Tre University. Since 2010 she has worked as researcher for Data Management.spa in collaboration with the Roma Tre University. Currently, she is a technologist at the Italian National Institute of Statistics (ISTAT), which is a public research organization. Her main research interests include inventory models, Markovian models, and nonlinear integer programming.

Gabriella Dellino graduated in Computer Science Engineering at the Polytechnic of Bari, in 2005. In 2009 she earned her Ph.D. in Applied Mathematics from the University of Bari. During the Ph.D. she visited the CentER Graduate School, Tilburg University (The Netherlands), where she carried on part of her research activity. In 2009 she joined the Department of Information Engineering (University of Siena) as a research associate in Operations Research, also being a member of the research group of Decision and Management Methods. Throughout these years she has been involved in several national and international research projects funded by academic organizations and companies. Currently, she is assistant professor in Management Science at IMT Institute for Advanced Studies (Lucca). Her research over the last five years has been focusing on optimization models and methods, combined with computer simulation methodologies and metamodeling techniques, with applications to Inventory and Supply Chain Management, Health Care Operations Management, and Multidisciplinary Design Optimization. Her research goal is to develop flexible tools supported by metamodeling approaches, to effectively manage uncertainty on complex systems described by simulation models.

She is a member of INFORMS (Institute for Operations Research and the Management Sciences) and AIRO (Italian Operational Research Society), and participates in the activities of several EURO (Association of European Operational Research Societies) working groups.

Dirk Deschrijver was born in Tielt, Belgium, on September 26, 1981. He received the Master degree (licentiaat) and Ph.D. degree in computer science from the University of Antwerp, Antwerp, Belgium, in 2003 and 2007, respectively. From May to October 2005, he was a Marie Curie Fellow with the Scientific Computing Goup, at Eindhoven University of Technology in the Netherlands. He is currently an FWO Post-Doctoral Research Fellow with the Department of Information Technology (INTEC), Ghent University, Belgium. His research activity mainly concerns scientific computing, surrogate modeling, Simulation-Optimization, Design of Experiments, sensitivity analysis, and machine learning algorithms.

Jan C. Fransoo is a professor of Operations Management and Logistics in the School of Industrial Engineering at Eindhoven University of Technology in the Netherlands. He holds an MSc in Industrial Engineering and a PhD in Operations Management & Logistics from Eindhoven University of Technology. He also serves as Research Director of the European Supply Chain Forum, a collaborative effort with about 25 large multinational companies. He is currently also vice-president of Dinalog (*Dutch Institute for Advanced Logistics*), a national center of excellence in the area of supply chain management. He has published over 60 papers in academic journals and presented at many academic and industry conferences. As part from his academic activities, Professor Fransoo has conducted dozens of projects with industry. His research mainly focuses on supply chain planning, production planning, and transportation planning.

Kostanca Katragjini was born in Tirana, Albania, in 1977. She received the M.S. degree in computer engineering (summa cum laude) from Politecnico di Bari, Italy, in 2004. In 2010 she received another M.S degree in Business management from Universidad de Valencia, Spain. Currently she works at Instituto Tecnológico de Informática, in Valencia. She leads a new software development, RoutingMaps, and carries on scientific research activities in Advanced Vehicle Routing Problems in cooperation with Universidad Politécnica de Valencia. She counts with several years of work experience in industrial optimization issues, having worked as process optimization engineer at Pfizer Manufacturing Plant, in Latina, Italy, from 2003 to 2008.

Bertrand Iooss obtained a Master in Statistics and Random Models in Finance in 1995 from University Paris VII. Further he defended (1998) his Ph.D thesis in Geostatistics at the Paris School of Mines on the subject of wave propagation in random media for seismic exploration problems. From 2000 to 2002, he worked as a research-engineer at the Institut Français du Pétrole in the Geophysics Division. From 2002 to 2010, he was a research-engineer at CEA Cadarache (French Institute of Atomic Energy) in the Nuclear Energy Division, working mainly on applications and developments of uncertainty and sensitivity analysis methods. Since 2009 he is the co-leader of the French research group (CNRS) on "Stochastic methods for computer experiments" and since 2010 he is a expert-researcher at Research and Development Division of Electricité de France. His research focuses on sensitivity analysis, uncertainty quantification, design of computer experiments, kriging metamodeling, and nuclear safety.

Carlo Meloni received the degree in Electronics Engineering from the Università di Roma La Sapienza in 1997. He got a Ph.D. in Operations Research from the same university in 2001. In November 2000 he joined the Università Roma Tre as post-doctoral fellow in Operations Research. In July 2002 he became Assistant Professor of Systems Engineering at the Politecnico di Bari. He took part in research projects promoted by different academic organizations and companies. His major research interests concern optimization and simulation methods with particular focus on planning and scheduling methods and their applications in manufacturing, logistics and services. Its work is documented in several international publications and conferences. He serves as referee different international journals and he is member of CIRO (Inter-University Operations Research Center), AIRO (Italian Operation Research Society) and he is active in different EURO (Association of European Operational Research Societies) Working Groups.

Veronica Piccialli is Assistant professor at Dipartimento di Informatica, Sistemi e Produzione, Università di Roma Tor Vergata. In 2000 she got a Master degree in Computer Science Engineering from Sapienza University of Rome. She earned her Ph.D. in Operations Research at Sapienza University of Rome in 2004. Her research is mainly concerned with nonlinear optimization. Her work has included studies on global optimization, Semidefinite Programming (SDP), Mixed Integer Non Linear Programming, and Hazardous Material Transportation.

Henri Pierreval is a full professor at IFMA since 1992. His research is carried out within the LIMOS laboratory of Clermont-Ferrand in France (laboratory of computing, modeling and optimization of systems, UMR CNRS 6158), where he co-leads the production systems research axis. His research activities are in the area of decision support for manufacturing systems and supply chains. He is the author or coauthor of about 200 scientific papers, with near 50 articles in international journals. He has been responsible for many scientific projects and research collaborations with industry. He collaborates with several international academic institutions and has been invited by universities of different countries.

Leonidas Sakalauskas is Head of the Operational Research Department at Institute of Mathematics and Informatics, Vilnius University. His research focuses on stochastic nonlinear and linear programming, Bayesian analysis, linear and nonlinear optimization, data mining, Monte-Carlo method, heuristic optimization, applied probability, importance sampling, Monte-Carlo Markov chain, stochastic approximation, queuing theory, network analysis and optimization, circuit optimization, engineering optimization.

Jesus Vicente Adria Sanchez works at the Biomechanics Institute of Valencia in the Technology Transfer Office of Research Results. Due to his role, he is actively involved in searching for funding opportunities for R&D projects, carrying out technology transfer functions, and disseminating the scientific and technical offer of the partner and client organizations. Thanks to his studies and his working experience gained over the years, he has developed very diverse tasks, including economic project justification and budget control.

Wim van Beers is an Assistant Professor at the Faculty of Economics and Business, Department of Quantitative Economics, University of Amsterdam. He is also a member of the Tilburg School of Economics and Management of Tilburg University. His research concerns the statistical design and analysis of simulation experiments with focus on Kriging interpolation in random simulation.

Inneke Van Nieuwenhuyse is Assistant Professor of Operations Management at the Research Center for Operations Management, K.U. Leuven, Belgium. She teaches courses on Supply Chain Management, Operations Strategy and Facilities Design, and has participated in a number of applied research projects for industrial and consulting companies. Her research interests focus on the design and analysis of stochastic manufacturing and supply chain systems, and on simulation optimization. Her research has been published in international journals such as European Journal of Operational Research, M&SOM, Computers in Industry, and International Journal of Production Economics.
